# BOSCH

Invented for life

The Bosch Group is a leading global supplier of technology and services. Bosch operations are divided into four business sectors: Mobility Solutions, Industrial Technology, Consumer Goods, and Energy and Building Technology. In your car, at home, or at work – Bosch technology shapes many areas of life.

### **Invented for Life**

Our slogan “invented for life” conveys the ambitious standards we have set ourselves and the values that we have long stood for. “Invented for life” stands for reliable technology designed and built to last. At the same time it embodies innovations and technology that spark our customers’ enthusiasm, improve quality of life, and help conserve resources.

### **“We are Bosch” – our mission statement**

As company founder Robert Bosch once said: “In the long term, an honest and fair approach to doing business will be the most profitable.” This statement continues to influence the way we do business today.

### **The Robert Bosch Stiftung (Robert Bosch Foundation)**

In 1964, The Robert Bosch Foundation was established to keep alive the social endeavours of its founder Robert Bosch. The foundation has since issued 1.4 billion euros in grants.

### **Sustainability**

Responsibility for the environment is a core value at Bosch and is firmly anchored in our principles for safety and protection. We consider addressing ecological issues an engine of innovation.

## **Did you know?**

Bosch has approximately  
**450 subsidiaries**  
and regional companies in over  
**60 countries**  
worldwide.

**402,166 Employees**  
Globally.

## **Bosch were voted “Best Brand 2020”**

by the readers of the German car magazine “auto motor und sport” in the following six categories:

- ▶ Batteries
- ▶ Filters
- ▶ Spark Plugs
- ▶ Wiper Blades
- ▶ Tools
- ▶ Workshop chains worldwide.

## A2 Bosch: Battery Experts since 1922

For Bosch, every battery is a technological milestone

More than  
**95 Years**  
of Bosch  
Batteries

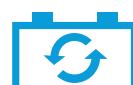

Today Bosch battery product range includes a comprehensive selection of technologically innovative products, suited to a variety of applications (see below).

Passenger Vehicles

Trucks & Buses

Deep Cycle and  
Reserve Power

Light Commercial  
Vehicles

Heavy Equipment

Lawn & Garden  
Equipment

4X4 & SUVs

Marine

- ▶ Introduction of 100% maintenance-free batteries\*
- ▶ Beginning of lead-calcium technology

▶ Bosch designed the new 48 volt battery (48V) with the purpose to cut CO<sub>2</sub> emissions. A 48V hybrid can considerably cut fuel consumption through the use of a boost recuperation system (BRS). Here's how it works: A conventional car loses energy whenever the driver brakes. The BRS stores this braking energy in a 48V battery and applies it later when the driver accelerates (electronic boost). This results in lower fuel consumption and produces less CO<sub>2</sub>.

- ▶ Launch of new batteries with labyrinth lid, stamped grid and AGM technology
- ▶ ST Hightec AGM and EFB batteries revolutionise the fast-growing battery market to meet customer demands

\*according to DIN V43539

# A4 Driven by Reliability

## The Bosch Distinction

### When Quality and Performance Matters

“Invented for life” stands for reliable technology designed and built to last. To meet the ever increasing energy demands of today’s vehicles, Bosch has a comprehensive line-up of maintenance-free batteries, including the SM Mega Power, ST Hightec and EFB range.

### Complete Systems Solutions

Bosch provides solutions for Parts, Diagnostics and Workshop Services. The complete system support package from Bosch includes:

- ▶ Diagnostic Equipment
- ▶ Diagnostic Software
- ▶ Technical Support
- ▶ Technical Training
- ▶ A range of products

### Endurance

Bosch Batteries – Designed to last. Bosch has successfully been making batteries since 1922. High density active materials and optimised particle size mean long service life.

### Future Driven

Bosch spends billions of dollars annually in research and development to preserve its position as a technological leader. Bosch is partnering with various automakers to give drivers of electric vehicles access to some 17,400 charge spots in five European countries – with the help of charging apps, for example. Bosch's expertise covers the entire electromobility ecosystem – from proven components for electrified applications to digital connection with the charging infrastructure.

### Global Battery Expertise

Robert Bosch GmbH and its 360 subsidiaries and regional companies are active in some 50 countries. If its sales and service partners are included, Bosch has a presence in some 150 countries. Thanks to its well-established local presence across multiple parts of the world, Bosch understands individual markets and can tailor its local activities to reflect their specific requirements and current trends. Bosch is committed to the continued development of battery systems with several hundred associates working on new battery innovations.

### Latest Technology

Bosch's portfolio stretches from power electronics, to 48-volt mild hybrid batteries, battery-management systems, electric motors and electric axle systems.

- ▶ Driverless car: In 2017 Bosch released the driverless car. It marked the first time a self-driving vehicle has driven on Australian roads.
- ▶ Bosch e-axle: Bosch has combined three powertrain components into one unit. The motor, power electronics, and transmission form one compact unit that directly drives the car's axle. This makes the powertrain not only far more efficient, but more affordable as well.
- ▶ Bosch electrical powertrain components already feature in more than 800,000 vehicles globally.

## A5 Product Range

### Passenger & Light Commercial Vehicles

#### SM Mega Power Plus

The SM Mega Power Plus is renowned for reliability to meet the electrical demand of a wide range of passenger vehicles.

- ▶ Long service life
- ▶ Optimal performance ensures maximum current flow and high cranking power
- ▶ Excellent safety and recyclability through innovative container material
- ▶ Completely sealed and maintenance free

#### SM Mega Power Silver

The SM Mega Power Silver is the optimum choice for prestige vehicles and currently exceeds all international standards set by their manufacturer.

- ▶ Maximum performance & long service life
- ▶ Optimized silver alloy increases connectivity for higher charge acceptance
- ▶ Stable design structure with silver technology supports additional safety features such as ESP and ABS
- ▶ Stable silver alloy grid reduces corrosion rate and decreases self-discharge

#### ST Hightec EFB

Enhanced Flooded Battery (EFB) are the perfect partner for Stop/Start vehicles today.

- ▶ Enhanced Flooded Battery (EFB) are built for high performance and reliability, even under extreme conditions
- ▶ High density active material and optimized particle size ensures extended service life
- ▶ Optimised negative grid alloy retards corrosion and prolongs battery life during high depth of discharge cycling

#### ST Hightec AGM

With its dynamic recharging capability and up to 4 times the number of discharge/charge cycles, the ST Hightec AGM meets the toughest power requirements as found in today's vehicles.

- ▶ Extra long service life with double labyrinth lid construction preventing water loss
- ▶ 100% leakage proof with AGM technology
- ▶ Higher charge acceptance

\*24 Months (Stop/Start) & 36 Months (Normal Use)

# A6 Product Range

## Heavy Commercial Vehicles

### SMT Mega Power Plus

The SMT Mega Power Plus is a economic choice with high cranking power and the capacity for extreme conditions and demanding on-board accessories.

- ▶ Calcium Calcium technology provides longer service life
- ▶ Dependable starting power

### SMT Mega Power Silver

Specifically designed with Silver Alloy technology, the SMT Mega Power Silver surpasses international standards set by original equipment manufacturers.

- ▶ Resists heat and corrosion providing extra long service life
- ▶ Safe and powerful energy supply for energy consuming vehicles

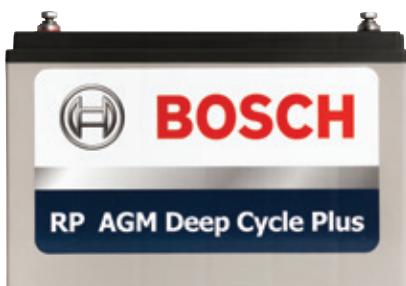

## A7 Product Range

### D Series – Deep Cycle VRLA Range

#### AGM Deep Cycle

Bosch AGM Deep Cycle Batteries are extensively used throughout the service, recreational and electric vehicle industries, with a capacity between the 4.5 to 14.0 AMP Range.

#### AGM Deep Cycle Plus

Bosch Deep Cycle Plus Batteries offer increased capacity between the 21.4 to 262 AMP Range.

#### GEL Deep Cycle

Bosch Deep Cycle Gel Batteries have excellent performance in protecting its components and superior deep discharge property.

Gel and AGM Technology at a Glance	GEL	AGM
Maintenance-free design	Yes	Yes
Internal oxygen recombination	Yes	Yes
Spill proof	Yes	Yes
Low self discharge rate	Yes	Yes
Recharging efficiency	Good	Good
Stability of capacity over cycle life	Very Good	Good
Deep Cycle life and resiliency to deep discharge damage	Very Good	Good
Best combination of starting and cycling purpose	Good	Very Good
High current discharge performance	Good	Very Good

#### Certification Standards

The Bosch VRLA range conforms to:

AS/NZS 4029.2:2000 (Stationary batteries-Lead-acid Part 2: Valve regulated type [IEC 60896-2:1995, MOD])  
“AktivFire Scheme” to Technical Specification TS001, Ver. 1.1

\*Certification details are available on [www.boschparts.com.au](http://www.boschparts.com.au)

## A8 Product Range

### Deep Cycle Power – Golf Cart

#### Deep Cycle Power – Golf Cart

Bosch Golf Cart Batteries aim for high cycle stability, which guarantee a reliable power supply even on the most challenging course. Specially designed for a varied range of motion applications that require frequent charging and discharging cycles, Bosch Golf Cart Batteries swing in the power you can rely on.

#### Recommended Applications

- ▶ Golf cart
- ▶ Floor machine
- ▶ Electric truck
- ▶ Electric recreational vehicle (RV)
- ▶ Electric utility vehicle

#### Advanced Welding Technology

- ▶ Secured cast-on-strap improves electrical conductivity by minimizing shedding of active materials
- ▶ High vibration resistance

#### Special Refill Plugs Design

- ▶ Specially designed structure releases gas in a single motion, guarantees less water consumption

#### Polypropylene Container

- ▶ High heat resistance for safer operation

#### High Density Paste

- ▶ Double paste per cube reduces normal material shedding and generates higher capacity

#### SiO<sub>2</sub>-PVC Separator In Nano Grade

- ▶ Higher porosity and symmetrical aperture reduces internal resistance for stable discharge output

#### Special Grid Construction

- ▶ Special alloy and thicker grid promotes deep cycling characteristics

### M Series – Marine

#### M4

Bosch marine batteries are carefully engineered to provide the optimum balance between starting and deep cycling duties. They are also thoroughly insulated to protect against the high frequency vibrations created by rough sea conditions.

- ▶ HCM is designed for dual purpose to handle both starting and light cycling

# A9 Battery Accessories

## DIY/Retail Range

### C3 and C7 Battery Charger

The Bosch C3 battery charger is an intelligent four-stage automatic battery charger with pulse charging and trickle charging capabilities.

The Bosch C7 Battery Charger is an intelligent six-stage automatic charger with great extra features including regeneration mode and power backup.

- ▶ Suitable for lead acid wet, AGM and GEL batteries
- ▶ Intelligent and automatic charging
- ▶ No risk of overcharge
- ▶ C3 6V/12, C7 12V/24

## Trade Range

### BAT 131 Battery Tester

The new portable battery tester BAT 131 from Bosch is perfectly suitable for testing 6 V and 12 V starter batteries.

- ▶ Menu guided intuitive operation, with results on large LCD screen
- ▶ Optimized test algorithm to test new / unused / instock batteries
- ▶ Extended test for 12 V and 24 V starting / charging system. The tester supports the optional use of a current clamp, which also improves the test results
- ▶ Stores up to 100 test reports; USB port for report downloads and future software updates
- ▶ Integrated printer provides “easy to understand” graphical printouts
- ▶ 3 m replaceable cable enables “flexibility” during battery and starter / alternator diagnosis

### BAT 135 Battery Tester

The BAT 135 battery tester with integrated printer tests 6V and 12V batteries from 40 - 2,000. It will also test 12V and 24V charging systems with a diode/ripple test.

- ▶ 6V, 12V batteries and 12V, 24V charging systems
- ▶ Test battery capacities from 40-2,000 CCA
- ▶ Test all automotive, light-duty and commercial batteries including:
  - AGM
  - Gel Cell
  - Flooded lead-acid
  - Start/Stop EFB
  - Commercial, SLI
- ▶ Presents State of Health and State of Charge percentage
- ▶ Integrated printer to capture test results and customer records
- ▶ Detachable test clamps for service and replacement
- ▶ Full charging system test with diode/ripple test
- ▶ Micro-load testing for proven, accurate results

# A10 Battery Accessories

## Trade Range

### BAT 131/135 Battery Testers

The battery tester range from Bosch is perfect whatever your testing needs are. Our BAT 131 and BAT 135 will cover all your requirements.

Product	BAT 131	BAT 135
<b>Applications</b>	PC, Truck, Motorcycle, Marine	PC, Truck, Motorcycle, Marine
<b>Test method</b>	Micro-load, Single Load, Dynamic Resistance Technology	Load-free test procedure
<b>Range of battery test</b>	6V / 12V	6V / 12V
<b>Range of battery types</b>	Flooded, VRLA, Vlies/AGM, Gel, EFB	Flooded, VRLA, Vlies/AGM, Gel, EFB
<b>Scope of norms</b>	CCA/SAE, EN, EN2, DIN, IEC, CA/MCA, JIS (Battery Type No.)	CCA/SAE, EN, EN2, DIN, IEC, CA/MCA, JIS (Battery Type No.)
<b>Scope of test (CCA)</b>	CCA/SAE: 40~2000 EN: 40~1885 DIN: 25~1120 IEC: 30~1320 JIS: battery type number CA/MCA: 50~2400	CCA: 50 - 1550 A JIS: battery type number
<b>Performance of alternator/generator test</b>	Yes (12 / 24V)	Yes (12 / 24V)
<b>System Test Starter / Generator</b>	Yes	Yes
<b>Included voltmeter</b>	1.5 V ~ 30V	Yes
<b>Languages</b>	25	21
<b>Built-in printer</b>	Yes	Yes
<b>Other functions</b>	- -	- New battery mode - Store 100 test results
<b>Protection against reverse polarity</b>	Yes	Yes
<b>USB-Port Connection PC, SW-Update</b>	No	Yes
<b>Supply</b>	Vehicle battery, 6 internal AA Batteries	Vehicle battery, 6 internal AA Batteries
<b>Accessory</b>	-	Current clamp

### KTS Scan Tool

Bosch diagnostic solutions to provide a simple workshop environment.

- ▶ Top-measurement technology for quick diagnosis
- ▶ Ethernet and PassThru for vehicle interface access
- ▶ Robust and future orientated

### BAT 645/690 Universal Battery Charger

The new Bosch Bat 645 and 690 Battery Charger offers automotive workshops two universally applicable professional devices.

- ▶ Featuring 45 or 90 ampere of continuous current output.
- ▶ Automatically detects the required nominal voltage
- ▶ Both chargers can be used for 12-volt car batteries and 24-volt commercial vehicle batteries alike
- ▶ USB port to ease software updates, allows for instant uploading characteristics

# A11 Bosch Start-Stop System Innovator

## EFB Batteries

**Enhanced Flooded Batteries (EFB)** are built for higher performance and reliability than standard flooded batteries. They are designed to support standard Start-Stop engines, which put greater demands on the battery.

Even for non Start-Stop vehicles, the EFB can also be fitted to enhance starting performance and meet the ever increasing electrical demands of modern vehicles.

The EFB provides increased cyclic stability, enabling faster recovery from deep discharges. In a Start-Stop vehicle, the EFB maintains power supply to the electrical devices when the engine shuts off, and is able to restart in a fraction of a second.

### Why is EFB essential for Start-Stop Systems?

- ▶ Extended cycle life compared with conventional battery
- ▶ Better deep cycling property to allow cranking with lower state of charge
- ▶ Higher charge acceptance for lesser charging opportunities
- ▶ Higher thermal stability for use in engine compartment and hot climate regions

### Advantages at a glance

#### Extended Service Life

- ▶ High density active material and optimised particle size for extended service life

#### Start / Stop

- ▶ Special negative additives are added to reduce the shrinkage of active materials which increases charging acceptance

#### Extra High Performance

- ▶ Small-sized windows of expanded grid lowers resistance and improves conductivity for consistently high performance

#### Higher Durability

- ▶ Optimised negative grid alloy inhibits corrosion and prolongs the battery life cycle with a high depth of discharge

#### Higher Depth of Discharge (DoD)

- ▶ Suitable for additional electrical load prevalent in modern vehicles to give you the extra power needed

For vehicles originally fitted with EFB or AGM Batteries, the replacement batteries should be of the same technology as the conventional types are not able to cope with the demands of the start-stop systems, potentially causing premature failure.

# A12 Bosch Start-Stop System Innovator

## AGM Batteries

**Absorbent Glass Mat (AGM)** is specifically designed for the special requirements of the start-stop and electronic battery management systems.

### What is Start-Stop technology?

With start-stop technology when the car comes to a stop the engine switches off. The battery continuously powers the air-conditioning , lighting and other informative systems. The engine automatically restarts once the driver engages the clutch pedal in an automatic vehicle, resulting in reduced fuel consumption and CO<sub>2</sub> emissions.

### Extra Long Service Life

#### Special Lid Structure

- Double lid with labyrinth construction prevents water loss

#### Wide Cast on Strap

- High vibration resistance minimizes shedding of active material

#### Polypropylene Case

- Made of highly durable material that can withstand greater internal pressure

### Assured Safety

- 100% leakage proof with AGM technology
- Eliminates emission of gases due to the recombinant nature
- Safety valves relieve excess pressure

### Absorbent Glass Mat

- Electrolyte absorbed by micro-porous glass separators eliminates acid spills and terminal corrosion
- Optimized component compression minimizes loss of active material
- Maximizes charge reaction due to evenly distributed electrolyte

### Centralized Grid Lug / Fine Mesh Grid

- Higher charging and discharging performance
- Designed for maximum current flow and high charge efficiency
- Made of Tin-Calcium material with high corrosion resistance
- Low internal resistance translates into higher power output

### Advantages at a glance

- (A) ► Supports start stop system designed to reduce fuel consumption
- (B) ► 100% sealed and leak-proof
- (C) ► High starting performance
- (D) ► Excellent charge acceptance and cold starting power
- (L) ► Longer service life due to unique built-in features including double lid to prevent water loss, high vibration resistance, and a highly durable polypropylene case.

# A18 Technical Information

## 1. Introduction

The Technical Information section provides essential information on the operation, characteristics, design, handling and charging of lead-acid batteries as well as the correct procedures for using, stocking and maintaining batteries for road vehicles. In addition, it provides information on the main areas of care needed to be taken for the safety of staff who work with Bosch batteries.

### 1.1 Safety Warnings and Standards

Observe the information on the battery, refer to the battery type-specific Safety Data Sheet (SDS) and vehicle operating manual before use.

#### Corrosive Hazard:

- ▶ Battery acid is extremely corrosive.
- ▶ The acid can cause burns and blindness.
- ▶ Fumes may be harmful if inhaled and cause respiratory irritation.
- ▶ Under normal operation conditions, there should be no contact with the electrolyte (diluted sulphuric acid).
- ▶ Please note that when the battery casing of a battery with fixed electrolyte is destroyed or damaged, bound electrolyte in glass fibre mats or jellified electrolyte is as corrosive as when liquid
- ▶ Wear eye protection and protective gloves.
- ▶ Charge or use battery only in a well-ventilated space.
- ▶ Do not tilt the battery permitting acid to leak out of vent openings

#### Explosion Hazard:

- ▶ An explosive gas mixture is formed when batteries are charged.
- ▶ Explosive gases can cause blindness and injury.
- ▶ Keep sparks, flames, lighted cigarettes or any ignition source away from battery.
- ▶ Avoid creating sparks when handling cables and electrical equipment as well as those caused by electrostatic discharge.
- ▶ Clean with damp cloth only; a dry cleaning cloth might become electrostatically charged and produce sparks.
- ▶ Avoid short circuits. Never connect the positive terminal to the negative terminal of the same battery. A short circuit can cause burns, fire or the explosion of the battery.

#### First Aid:

- ▶ Batteries contain Sulphuric Acid.
- ▶ In the event of contact with battery contents, remove contaminated clothing, flush contact area with large amounts of water and contact a physician immediately.
- ▶ If acid is swallowed, do not induce vomiting, give water to rinse mouth then provide liquid slowly and as much as casually can comfortably drink. Contact Poisons Information Centre or physician immediately.

#### Transport:

- ▶ Batteries are classified as Dangerous Goods for land, air and sea transport.
- ▶ Placarding requirements may apply.
- ▶ Refer to Safety Data Sheet and applicable ADG, ICAO-IATA or IMDG codes.

#### Environmental Hazard:

- ▶ Battery contents are extremely toxic to aquatic life with long lasting effects.
- ▶ Avoid release of any battery contents to the environment.
- ▶ Clean up spills immediately.
- ▶ Never dispose of old batteries as household or general waste.
- ▶ Dispose of old batteries in accordance with local regulations.

#### Warnings:

- ▶ The enclosure becomes brittle with time. Do not expose batteries to direct sunlight.
- ▶ Discharged batteries can freeze so store in a place where they are protected from frost.

# A19 Technical Information

## 2. Battery Recharging Procedure

### 2.1 Battery Charging Indicators

Charging of the battery is required when the:

- ▶ Storage period is more than 6 months without charging.
- ▶ Colour of state of charge (SOC) indicator turns black.
- ▶ Battery open circuit voltage (OCV) is less than 12.4V.

**Note: Using an automatic battery charger is recommended. Recharging with a constant current or voltage charger without any automatic switch off or switch over to another charge curve is not recommended.**

### 2.2 Steps Prior to Charging

- ▶ Wear protective glasses whilst handling the battery.
- ▶ Do not carry out charging near fire or spark.
- ▶ Do not charge damaged or frozen battery.
- ▶ Boost charge is not recommended.
- ▶ If the battery has accessible screw-in plugs, check the electrolyte level in each cell and top up with distilled water if necessary.
- ▶ Do not switch on the charger until battery has been connected. Do not switch off the charger until charging is complete.

### 2.3 Steps prior to charging multiple batteries in series

- ▶ Position the batteries so that there is a space of at least 20mm between them.
- ▶ Only use batteries with the same capacity and same state of charge in the same circuit. This prevents the slightly discharged batteries from being overcharged when connected to the same circuit as a battery that needs a longer time to recharge.
- ▶ Batteries must always be connected in series, that is, the positive pole of a battery should be connected to the negative pole of the neighbouring battery, thus the positive pole of the first battery and the negative pole of the last battery will always be open.
- ▶ All of the batteries for recharging should have their density and/or open voltage checked, so that the batteries could be grouped (based on state of charge) for the purpose of placing them in the right circuit for the recharging process.

**Warning:** Never connect the positive pole to the negative pole of the same battery or in the same series, as this will cause a short circuit.

Check that the connections (lugs) make good contact by twisting them slightly while pressing them onto the pole.

### 2.4

### Recharging with a Constant Current

Only recharge with a constant current if unavoidable.

When recharging the battery with a constant current, the voltage will increase slowly during the recharging. Towards the end, the voltage increases rapidly and the process should be stopped at the voltage value limit.

Example: 45Ah battery.

Recharging Current:  $45 \times 0.1 = 4.5\text{A}$  (10% of the nominal capacity of the battery).

The recharging time depends on the state of charge of the battery.

OCV in stable condition	State of charge	Battery capacity (20Ah)					
		35-40Ah	41-50Ah	51-65Ah	66-75Ah	76-90Ah	91-110Ah
12.5 - 12.59	70%	3Amps x 4hrs	4Amps x 4hrs	5Amps x 4hrs	6Amps x 4hrs	6Amps x 4hrs	7Amps x 4hrs
12.4 - 12.49	60%	3Amps x 6hrs	4Amps x 6hrs	5Amps x 6hrs	6Amps x 6hrs	6Amps x 7hrs	7Amps x 7hrs
12.3 - 12.39	50%	3Amps x 8hrs	4Amps x 8hrs	5Amps x 8hrs	6Amps x 8hrs	6Amps x 9hrs	7Amps x 10hrs
12.2 - 12.29	40%	3Amps x 10hrs	4Amps x 10hrs	5Amps x 10hrs	6Amps x 10hrs	6Amps x 12hrs	7Amps x 12hrs
12.1 - 12.19	30%	3Amps x 13hrs	4Amps x 12hrs	5Amps x 12hrs	6Amps x 12hrs	6Amps x 14hrs	7Amps x 15hrs
Below 12.09	20%	3Amps x 15hrs	4Amps x 14hrs	5Amps x 14hrs	6Amps x 14hrs	6Amps x 16hrs	7Amps x 17hrs

**Warning:** The battery temperature must not exceed 50°C during the recharging process.

#### Note:

- ▶ The above table shows approximate Ah and charging hours needed for recharging according to the battery capacity and the OCV under a constant current charging method. Accordingly, the Ah or the charging hours may be adjusted depending on the type and the state of the charged battery.
- ▶ Always charge the battery according to the amount of charge needed. Prolonged charging times, especially with a constant current, could cause the battery to become overcharged, causing an unnecessary loss of water in the process.
- ▶ Avoid quick charges that are done without controlling the temperature, current or time.
- ▶ Some batteries below 12.1V can be hard to recharge due to the long time elapsed since the last re-charge. It is very difficult to recover its original performance.

### 2.5 Recharging with a Constant Voltage

When using this charging method, the initial current applied to the battery should be limited to 25A and the voltage to 14.4V.

The battery charging time will vary according to its state of charge, as shown in the table below:

# A20 Technical Information

Battery voltage when empty (volts)	Recharging Time (hours)
12.00 to 12.20	6 to 12
11.80 to 11.99	10 to 16
11.50 to 11.79	16 to 20
11.00 to 11.49	20 to 24
Deeply discharged batteries	24 to 30

**Warning:** the battery temperature must not exceed 50°C during the recharging process.

## 2.6 Actions During and After Recharging

### ► Electrolyte Temperature

The electrolyte temperature, hence the battery container temperature must not exceed 50°C. The recharging process should be stopped if this temperature is exceeded.

The process may be resumed once all batteries in the recharging circuit reach 45°C or less.

### ► Rest Time

We recommend waiting approximately 20 minutes to allow gases to dissipate before removing the leads from the batteries, as some chargers remain in a charged state and can generate sparks. Replace the vent caps and gas tubes if they were removed. Wash the battery using warm water and dry it.

## 3. Battery Usage and Defects

### 3.1 Jump Start

When performing a jump start using jumper cables, there can be bursts of high voltage of hundreds of volts when connecting/disconnecting the cables. If the vehicle's electrical system is not protected against such surges, they can cause damage to sensitive electronic components, like the ABS system, the airbags control units, etc.

#### Please follow the vehicle manufacturer's operating instructions!

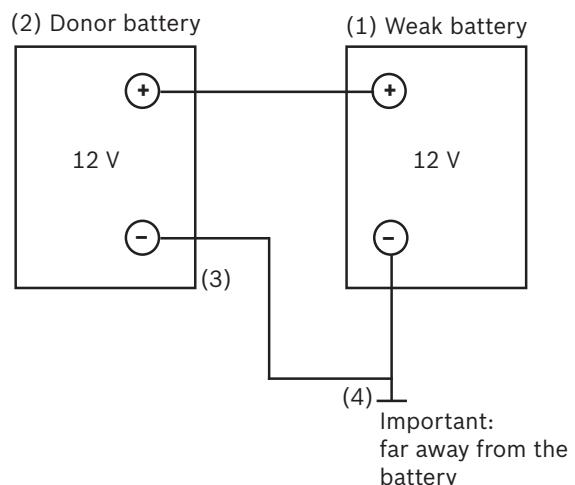

- Do not attempt to jump start a damaged battery.
- When giving starting aid with jumper cables, high voltage peaks of several hundred volts can occur when connecting the cables. If the vehicle electrical system is not protected from these peaks, they can damage sensitive electronic components.
- Only use standardised battery jumper cables. Only connect batteries of the same nominal voltage.
- Before giving starting aid, try to figure out the reason for the battery weakness. If the reason is a failure in the vehicle electrical system, starting aid should not be given. The battery or the

electric system of the vehicle giving starting aid might become damaged.

- **Warning:** Always protect your eyes and hands from the battery.

#### How to do it: 4 easy steps

1. Turn off both vehicle engines.
2. Connect the positive terminals (1) and (2) and then connect the charged battery's negative terminal (3) with a bare metallic point (4) away from the battery of the vehicle requiring assistance.
3. Start the engine in the vehicle providing assistance, followed by the engine in the vehicle. Limit cranking at 15 seconds.
4. Disconnect the cables in reverse order (4-3-2-1).

### 3.2

## Battery Installation and Removal

Modern vehicles are equipped with sensitive electrical systems such as airbag controllers, ABS, stability and traction control units, onboard computers etc. For some vehicles, it is necessary to follow certain procedures in order to install or take the battery out of service. For example, the electrical components may require resetting after they have been turned off.

#### Please follow the vehicle manufacturer's operating instructions!

1. Switch off the engine and all electrical equipment before installing or removing the battery.
2. Install only batteries that are fully charged and undamaged.
3. Install the type of battery recommended for the particular vehicle.
4. Avoid causing short-circuits with tools or cables. After having installed the battery in the vehicle, remove the covers from the terminal poles just before connecting the cables to the terminals.

# A21 Technical Information

5. For removing, disconnect the negative terminal (-) first and then the positive terminal (+). Before installing the battery, clean the surface inside the vehicle. Fix the battery safely and securely. If the battery is not securely installed, it will be subjected to a larger degree of vibration which can reduce its service life. Friction between the battery container and the support area can cause damage and wear to the container. Also, the container can rupture, causing the electrolyte to leak out.
6. Clean the battery terminals and its lugs. When installing, connect the positive terminal (+) first, then the negative terminal (-). Check that the terminal lugs are firmly in place. Make use of the accessories from the previous battery such as hose connections, terminal supports and covers for terminals. Use the top-up caps supplied.
7. At least one vent must remain open to avoid the risk of an explosion.

## 3.3 Taking the Vehicle out of Service

When a vehicle is taken out of service (for example, when it is used only seasonally), charge up the battery and store it in a cool place. If it is necessary to leave the battery in the vehicle, disconnect the negative terminal. Check the OCV of the battery every two months. If the OCV is below 12.4V, recharge the battery.

## 3.4 Technical Information on Battery Problems

### 3.4.1 Manufacturing Defects Short Circuit / Dead Cell

If a battery has a service life that is less than 12 months, the problem is usually caused by a dead cell, that is, one of the cells has a density value that is much lower than the others. The affected cell bubbles visibly during the high-discharge test. To evaluate the density, a high-discharge test should be carried out. In some cases, the dead cell may be visible in the form of a sulphated cell.

#### Internal Breakage

The battery has good density values, but the voltage across the terminals cannot be measured.

### 3.4.2 Mishandling and Warranty Exclusion

The following technical problems are caused by mishandling the battery. Such cases are not subject to warranty.

#### Low State of Charge

A low state of charge is the first stage of deep discharge. With a low state of charge, the active

material will not have sustained any damage. The battery can still be charged with a standard charger.

The causes of a low state of charge are:

- A defective alternator.
- A low voltage output from the regulator.
- High contact resistances caused by loose cable connections or dirt on the cable terminals.
- Slack drive belts.
- Insufficient engine running time due to short journey times.
- Subsequent addition of electrical equipment.
- Defective equipment causing continuous discharge.

#### Deep Discharge

A battery suffers a deep discharge when its capacity is totally used up. The longer the battery remains in this state, the greater will be the damage done to the active material. The plates begin to suffer sulphation and recharging becomes impossible. This damage is irreversible.

Possible causes of deep discharge are:

- See 'Causes of Low State of Charge'
- Headlights or other electrical equipment are not switched off.

A battery in a good state of charge will usually have a load-free voltage >12.6V. Therefore, the voltage without charge for each cell is about 2.1V. If there is a short circuit in just a single cell, this will result in a reduction of about 2.1V of the terminal voltage, which would be a typical 'short-circuit' voltage of 10.5V. The likelihood of two cells within the same battery having a short circuit is very low. In the case of two cells with short circuits, the OCV drops by 4.2V to a value of 8.4V. In order to exclude the effects of long shipment and storage times on the terminal voltage, as well as the possibility of two cells with short circuits etc., only batteries with a load-free voltage lower than 8 volts are regarded as deeply discharged and a claim on warranty will be rejected.

#### Sulphation

If a battery is left in a discharged state for an excessive period of time, there will be a chemical reaction known as sulphation, which will certainly compromise its performance. During the discharge process, lead sulphate is generated on the positive and negative plates and distributed evenly among them.

The longer the battery is left in a discharged state, the more the small sulphate crystals grow into larger crystals and it becomes very difficult to convert these back into lead dioxide. Sulphation can become visible in the form of a white/grey layer on the plates. In most cases,

# A22 Technical Information

this damage is irreversible and the battery cannot be used anymore.

Sulphation can either occur during storage or if the battery is installed in a vehicle (or equipment) that is not used for a long period of time. While in a vehicle, the battery is constantly drained by the clock, the alarm system, etc., resulting in a decrease in the level of charge of the battery and, after a certain period of time, sulphation of the plates. However, even a disconnected battery undergoes sulphation due to self-discharge.

The causes of sulphation can be summed up as follows:

- ▶ There is an excessive lapse of time between one recharging and the next.
- ▶ An engine starter battery is used for “deep cycles”. This type of battery is not resistant to deep discharges.
- ▶ The battery is undercharged or the charging and adjustment of levels is carried out incorrectly.
- ▶ Low electrolyte level: a battery plate exposed to air starts to experience sulphation immediately. Sulphation (lead sulphate) impedes the chemical reaction between the acid (electrolyte) and the active material (made up of lead) on the plates and it prevents normal operation of the battery. Even after recharging, the voltage will be low (< 12.4V), but, usually the cells will show equal values. Sulphation is not a manufacturing defect.

## Acid Stratification

Acid stratification is a common cause of battery failure. In a stratified battery, the electrolyte is concentrated at the bottom and the top half of the cell has very little acid. Stratification takes place when the battery is kept with low charge (below 80%) and is never fully recharged. Short journeys that include the use of the windscreens wipers and electric heaters contribute to this phenomenon. Acid stratification reduces the general performance of the battery.

Figure 2 shows a normal battery in which the

Figure 1 – Picture of battery with deep discharge and sulphation

acid is distributed evenly from top to bottom. This battery has good performance because the correct concentration of acid is distributed evenly over the plates. Figure 3 shows a stratified battery in which the acid concentration is light at the top and heavy at the bottom. A light acid limits the plate activation, speeds up corrosion and reduces the performance. On the other hand, high acid concentration at the bottom artificially increases the open circuit voltage. The battery seems to be fully charged, but it delivers low starting power. High acid concentration also results in sulphation and further reduces the already low conductivity. If this condition goes undetected, it will ultimately result in battery failure.

Fully recharging or shaking the battery tends to correct the problem.

## Overcharging

Overcharging is often caused by an unsuitably high temperature in the engine compartment. Other than this, a defective voltage regulator is often another cause of overcharging. A high level of corrosion, loose particles of positive active material, damaged active material and high water consumption are characteristics of overcharging. A low level of electrolyte and a black layer on the filler caps are usually evidence for an overcharged battery. Excessive water consumption leads to an increase in electrolyte density. Also, a high temperature results in a lower internal battery resistance, causing an increase in the charge current and this increases the effect of overcharging.

Figure 2 – Without acid stratification

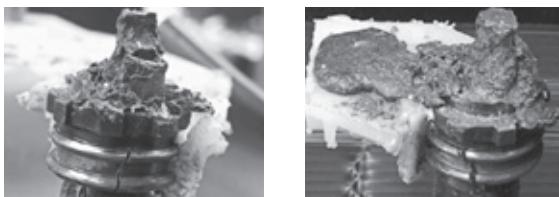

Figure 3 – With acid stratification

# A23 Technical Information

## Physical Damage

The battery container and the terminals will suffer obvious damage if the battery is installed incorrectly, if the cables are wrongly connected or if the cables are hammered incorrectly into the terminals.

In addition, if the terminal poles are melted, this indicates that the battery has had a short circuit. (Figure 4 and Figure 5)

Figures 4 & 5 – Picture of a melted battery terminal

## Incorrect Application

Batteries recommended by Bosch match or exceed the original equipment specifications. Choosing a battery of lower capacity or power will result in a shorter service life and premature battery failure. Usually, the result is a low charge level together with the effects described above.

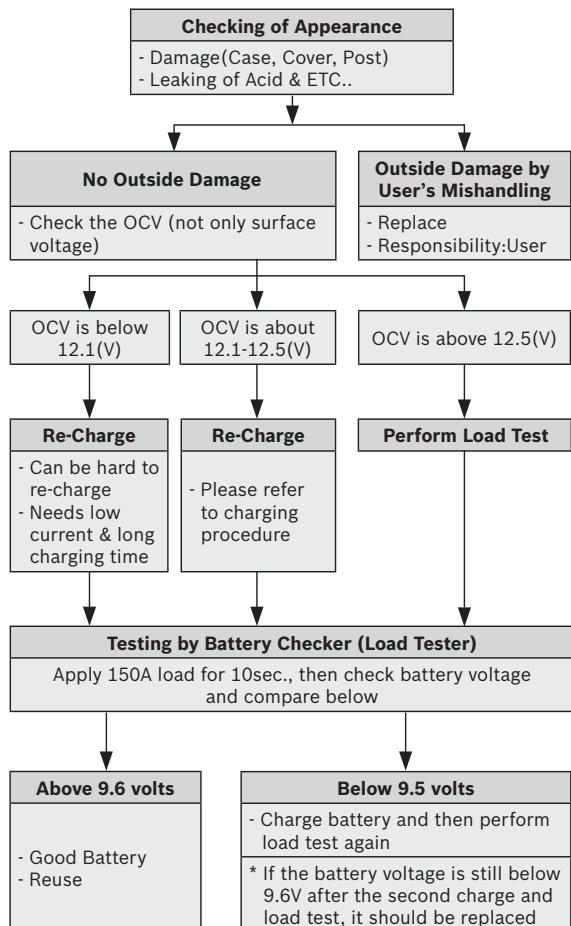

## Wear and Tear

During the charging and discharging cycle, the battery plate material (active material) moves about due to the electrochemical processes occurring. Every time that the battery undergoes a charging or discharging cycle, a small amount of active material comes loose from the plates. This normal aging process, caused by the charging and discharging cycles, results in a loss of battery capacity and, ultimately, the loss of its capacity to start the vehicle or power its equipment.

A battery has a finite number of cycles that it undergoes before losing its capacity. Vehicles that do a large number of short journeys, such as taxis, mini-cabs, trucks and buses, reach the maximum number of cycles in a shorter time than vehicles that do longer journeys. As a result, the batteries used in these types of vehicles may exhibit the above mentioned symptoms earlier than expected.

## 3.5

## Checking for Malfunction by Load Tester

## 4.

### 4.1

## Inspection, Storage and Stacking

### Inspection on Receipt of Goods

Before unloading the consignment of batteries, please check the details on the invoice against the goods delivered and your order details.

Check:

- ▶ The battery type.
  - ▶ The quantities.
  - ▶ Damaged batteries, batteries that were not transported in a horizontal position or those with leakage of electrolyte, should be rejected and sent back to the supplier, at the carrier's expense.
- After unloading and before stocking the batteries, check:
- ▶ The age of the battery, calculating this from its date of manufacture.
  - ▶ The open circuit voltage.
  - ▶ Do a visual inspection (container, cover, terminals, charge indicator, colours, and labels).

# A24 Deep Cycle Charging, Maintenance & Storage

## 4.2

### Storage

The batteries should be stored in a horizontal position on wooden palettes or racks (not tilted). Do not place them directly onto the ground, because small stones or sharp edges on the concrete floor can damage the battery container and cause leaks.

Batteries should be stored in a dry place and must not be exposed to direct sunlight. The storage temperature should be between 10°C and 35°C. Storage temperatures that are higher than this will result in greater water consumption, corrosion and self-discharge. The storage temperature must not exceed 35°C. The maximum period for storing decreases when batteries are stored at high temperatures.

## 4.3

### Stacking

In order to avoid scratches and damage of labels, do not store unpackaged batteries on top of the other.

Always ensure that the instructions for stacking batteries are followed. Batteries up to 75Ah may be stacked in up to 5 tiers; batteries above 90Ah in up to 3 tiers and batteries above 150Ah in a maximum of 2 tiers. Do not remove the plastic shrink-wrapping. Use cardboard or polystyrene as an additional layer between the batteries. Do not stack batteries with their terminal poles protruding without taking special measures to protect these terminals and to ensure that the stack is stable.

**Follow the First in / First out (FiFo) procedure strictly. Following the FiFo procedure means that the first battery stored in stock is also the first battery to leave.**

## Deep Cycle Charging, Maintenance & Storage

### 1.

#### Maintenance - Charging Instructions

### 1.1

Before placing the battery on charge after it has been in service, check its water level. If the level is below the separators at the start of charge, add only enough distilled water to cover the separators.

### 1.2

Always check specific gravity and temperature readings before charging the battery. Correct specific gravity readings to 27°C.

### 1.3

If an automatic or taper-type charger is used, set the rate of charge according to the charger manufacturer's instructions.

### 1.4

Do not overcharge & do not undercharge. If the battery temperature reaches 50°C during the charging cycle, the charging rate should be lowered or interrupted until the battery has cooled to room temperature. Specific gravity readings should be corrected to 27°C. For each 10°C increment above 27°C add four points

to the hydrometer reading. E.g.: 37°C at 1.250 Sp. Gr. = 1.254 Sp. Gr. For each 10°C below 27°C, subtract four points from the hydrometer reading. E.g.: 17°C at 1.250 Sp. Gr. = 1.246 Sp. Gr. Before charging, be sure that the electrolyte covers the top of the plates. If not, add distilled water to bring level to the top of plates. Do not overfill, as the electrolyte will expand during charging. Always replace vent caps before charging. After charging is complete, follow step six.

### 1.5

Do not overfill & do not underfill the battery. Fill each cell to approximately 3mm below the bottom of the extended vent tube. Overfilling the cells when adding distilled water results in the loss of electrolyte, lowering specific gravity and ampere hour capacity.

### 1.6

**NOTE: never add acid to a battery—use only distilled water.**

### 1.7

Keep battery tops dry and clean. A moist condition will result in electrical leakage across the battery to the metal hold-down clamp, causing corrosion build-up.

### 1.8

With vent caps firmly in place, periodically clean battery tops, hold-down bracket, and terminal connections with baking soda solution and a brush.

**NOTE: protective gloves should be worn when undertaking this procedure.**

### 1.9

Check all terminals and tighten firmly. Apply a thin coating of petroleum jelly to repel corrosion. Never allow a battery to stand unused in a discharged condition. After each use, no matter how short, the battery should be fully recharged. If the battery does not come up to full charge after following the correct charging procedure (as provided by the manufacturer of the charger used), check for low line voltage and/or a faulty charger. If charging problems persist, please contact the distributor/reseller from which the battery was purchased.

### 1.10

If the battery's performance is weak or slow while in service, the following checks should be performed:

- ▶ Using a hydrometer, take specific gravity readings of all cells. If readings are above 1.225 specific gravity, apply a load test to each individual battery using a load tester, following the manufacturer's recommended procedure and instructions. If the battery proves to be unserviceable, it should be replaced.

**NOTE: do not apply load tester if cell readings are below 1.225 specific gravity.**

# A25 Marine Battery Charging, Maintenance & Storage

- 1.13** If the equipment being used contains multiple batteries, all batteries should be of approximately the same age.
- 1.14** If the temperature of the battery or the outside ambient temperature is below 15°C, the battery's performance and capacity will be reduced, and more charging time will be required.

## 2. Off-duty Storage

- 2.1** If a battery is stored and not kept in regular service, it should be maintained as follows:
- ▶ Maintain at full rate of charge.
  - ▶ Store in a cool, dry place, ensuring the ambient temperature is not below 0°C and not above 27°C. A battery at 1.100 specific gravity will freeze at -7°C.
  - ▶ Ensure charging procedure is completed every 45 days, or whenever the measured specific gravity reading has dropped to 1.200, corrected to 27°C.
- 2.2** The battery will self-discharge when not in use. Approximate rates of discharge are indicated below:
- ▶ At 38°C: discharge rate = 3 pts in specific gravity per day.
  - ▶ At 27°C: discharge rate = 2 pts in specific gravity per day.
  - ▶ At 10°C: discharge rate = 0.5 pts in specific gravity per day.
  - ▶ At -1°C, discharge rate = 0.1 pts in specific gravity per day.
- Proper care and maintenance of batteries used in motive power service is the key to ensuring maximum performance, sustained trouble-free lifespan, and greatly-reduced equipment operating costs.

## Marine Battery Charging, Maintenance and Storage

### 1. Helpful Tips

#### 1.1 Maintenance

Sulphation is a major cause of battery failure in marine applications and is often created by very low voltage. Maintaining battery voltage is a must to ensure a safe day out on the water, so it pays to check your battery voltage prior to departure.

#### 1.2 Keep it clean

Ensure the battery posts and terminals are clean and secure before every trip. The marine environment places additional demands on all equipment and basic maintenance can ensure these demands are adequately managed.

#### 1.3 Off-season storage

Marine batteries that are not in use must be cared for as follows to extend the battery life and reliability:

- ▶ Charge up the battery and if it is necessary, leave the battery in the vessel and disconnect the negative terminal. Otherwise, remove the battery and store in a cool place. Check the OCV of the battery every two months. If the OCV is below 12.4V, recharge the battery.

For information on Battery charging refer to pg A10

# A26 Voluntary Repair or Replacement

## Warranty Robert Bosch (Australia) Pty Ltd Automotive Aftermarket

### Applicable for purchases of specified automotive aftermarket products after 1 February 2016

All Bosch automotive aftermarket parts are carefully checked, tested and are subject to the stringent quality controls of Bosch Quality Assurance.

#### Important Note: Consumer Protections

#### If you have purchased your product in Australia, you should be aware that:

*This warranty is provided **in addition to** other rights and remedies held by a consumer at law. Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.*

#### If you have purchased your product in New Zealand, you should be aware that:

This warranty is supplemental to any other rights and remedies you have under the *Consumer Guarantees Act 1993 NZ*, unless your purchase is made for commercial purposes, in which case Bosch excludes all consumer guarantees implied in the *Consumer Guarantees Act 1993 NZ* in respect of your product.

(A reference to "Bosch" in this Voluntary Repair or Replacement Warranty is a reference to Robert Bosch (Australia) Pty Ltd, unless from the particular context it is obvious that it is being used as a trade mark or brand name.)

#### Warranty

Bosch warrants, at its option, to repair or exchange those particular classes of automotive aftermarket products specified in the product table on the last page of this warranty (Products) if such Products are faulty or defective in manufacture or materials during the relevant Product warranty period.

This warranty is provided for the benefit of persons who purchase and fit the Products ("Workshops"), and of end-users of the Products, in Australia or New Zealand.

Repair or replacement under this warranty does not extend to repair or replacement, or any cost of replacement, of consumables or accessories incorporated into or supplied with the Products (for example, bearings or brushes).

This warranty only covers repair or replacement of the defective Products. It does not cover:

- any costs incurred by the Workshop or end-user in normal or scheduled maintenance of the Products; or
- any damage to property, personal injury, direct or indirect loss, consequential losses or other expenses arising from breach of this warranty. Any Workshop or end-user concerned with this exclusion should consider the "Important Note: Consumer Protections" above.

#### Warranty Periods

The warranty periods for the Products vary according to the particular class. The respective warranty periods are specified in the product table on the last page of this warranty.

In each case, the warranty commences with effect from:

- the date of purchase of the relevant Product by the Workshop or the end-user of the Product (as the case may be); or
- in the case of test equipment (excluding spare parts), the date of installation or three months after the date of purchase, which ever occurs earliest.

It ends at the expiration of the time indicated for the Product in the table at the end of this voluntary warranty or, in the case of a Product for which another measure is also specified to define the length of the warranty period (for example, number of kilometres), it ends at the expiration of the specified time period or at the time when such specified measure of use is reached – whichever occurs first.

# A27 Voluntary Repair or Replacement

## Warranty Robert Bosch (Australia) Pty Ltd Automotive Aftermarket

### Warranty Conditions

This voluntary warranty is subject to the following conditions:

- The warranty is not transferable and is only offered to the original Workshop or end user of the Product (as the case may be).
- Where a Product or part thereof is replaced or repaired under this voluntary warranty, the balance of the original voluntary warranty will apply. The replacement Product or product does not carry a new voluntary warranty.
- The warranty does not extend to any Products that have been completely or partially disassembled.
- These warranty terms cannot be amended except in writing by an authorised officer of Bosch.
- The warranty only applies to Products purchased by a Workshop or an end-user in Australia or New Zealand from Bosch or from a reseller where the Products have been originally sold by Bosch.
- Any claim made under this voluntary warranty must meet the requirements set out below in the "How to Make a Warranty Claim" section.

### Warranty Exclusions

This warranty will not apply to a defect or fault to the extent to which it arises:

- due to storage, handling or installation of the Products otherwise than in accordance with instructions provided for the Products by Bosch or without reasonable care;
- due to operation, use or maintenance of the Products otherwise than in accordance with instructions provided for the Products by Bosch or without reasonable care;
- due to accidental damage or to use of the Products for a purpose or in environmental conditions for which the Products were not designed or sold, or use of the products outside the specified or normal operating ranges for such Products;
- as a result of changes which occur in the condition or operational qualities of the Products due to climate or other environmental influence, foreign material contamination or water entry or as a result of exposure to excessive heat or solvents;
- from normal wear and tear or when replacement or repair of parts would be part of normal maintenance or service of the Products (for example, bearings or brushes) or where the damage is only to surface coating, varnish or enamel;
- as a result of repairs, alterations or modifications to the Product which have been performed by a third party;

- from the use of any spare parts not manufactured, sold or approved by Bosch in connection with the repair or replacement of Product, or
- as a result of any other defective or malfunctioning parts in the vehicle in which the Product has been installed.

This voluntary warranty does not apply to damage caused by continued use of a Product after it is known, or would have been known with regular servicing, it is defective.

### Wrong Deliveries and Transit Damage

Wrong deliveries, incorrect or damaged packing and transit damage claims are not warranty claims. Such cases should be directed to Bosch's Customer Service line in Australia on 1300 307 040 or in New Zealand on 0800 452 896.

### How to Make a Warranty Claim

If a Product fails within the warranty period, the Workshop or the end-user must stop fitting or using the Product or the vehicle in which the Product is stored (as the case may be) until the Product is returned or made available for assessment.

The Product must be returned to the place of purchase (which in the case of a fault or defect identified after installation, may be the Workshop which fitted the Product) for assessment before the end of the Warranty Period (see Deadlines for Submitting Warranty Claims below).

Where this is not practicable, or further warranty support is required, please call Bosch on 1300 307 040 (within Australia) or 0800 452 896 (within New Zealand). Alternatively, for claims in Australia, you can post details of your claim to Robert Bosch (Aust) Pty Ltd, Attn AA Warranty Department, Locked Bag 66, Clayton Stn, 3169. Claims received by post will take longer to process and we encourage you to call us first. Bosch may refer you to one of its Bosch Warranty Authorised Service Dealers.

# A28 Voluntary Repair or Replacement

## Warranty Robert Bosch (Australia) Pty Ltd Automotive Aftermarket

In all cases, the Workshop or end-user must provide proof of purchase, and any other details or evidence reasonably requested by Bosch or the supplier of the Product to substantiate the warranty claim.

### Costs of Submitting a Warranty Claim

For invalid claims under this voluntary warranty, Bosch will not be liable for the end user's or the Workshop's costs in making the warranty claim, including transport or return freight.

In respect of valid claims under this voluntary warranty, the Workshop or the end user (as the case may be) will not be charged for costs associated with making a warranty claim, including warranty processing costs, the cost of replacement parts or freight. Reimbursement for necessary and reasonably incurred costs or expenses in making valid warranty claims under this manufacturer's warranty may be sought from Bosch. To enquire how to make a claim for reimbursement for costs incurred in submitting a warranty claim, please call 1300 307 040 in Australia or 0800 452 896 in New Zealand. Documentary evidence in support of such claim will be required.

### Deadlines for Submitting Warranty Claims

Bosch aims to rectify genuine quality problems as a priority. This is generally achieved by investigating why defective products have failed and by introducing immediate corrective action measures to prevent re-occurring warranty failures. It is therefore critical that all warranty claims are promptly submitted to Bosch by the end of the warranty period. Bosch requests however that returns are made no later than 30 days after becoming aware of any defect or in order to assist Bosch to maintain its strict quality controls.

### Packaging

Products do not need to be returned with the original packaging to make a warranty claim.

### Product Liability and Product Safety

Bosch should be informed immediately about any potential product safety concerns within and outside the warranty period. Bosch is well aware of its product liability and product safety obligations and responsibilities. It is Bosch's aim to ensure appropriate product safety standards are met in order to avoid injury, loss and damage caused by defects in any Products.

### Privacy

Bosch is required (or in the case of a Workshop, may be required) to seek personal information from an end-user or Workshop who seeks to make a claim under this warranty.

Such personal information may be used by Bosch and/or any service dealer who is authorised to process warranty claims and/or carry out warranty repairs on behalf of Bosch ("Warranty Authorised Service Dealer") for the purpose of processing such warranty claim and also for the provision of customer support and further information about Bosch's products and services (Purpose).

If an end-user or Workshop does not wish to provide Bosch and/or its Warranty Authorised Service Dealer with personal information, Bosch may be unable to process the end-user's or Workshop's warranty claim or to provide the end-user or Workshop with additional customer support, services and information.

Bosch is committed to protecting the privacy of personal information and will act in compliance with applicable privacy laws, including the National Privacy Principles under the Australian Privacy Act 1988 (Cth) (as amended) and New Zealand's Information Privacy Principles described in the Privacy Act 1993 (NZ).

Bosch takes security measures in order to protect any personal information collected in the warranty claim process against manipulation, loss, destruction, access by unauthorized persons or unauthorized disclosure.

Bosch will not disclose any personal information to third parties other than for the Purpose or except as required by law.

An end-user or Workshop has the right to access the personal information Bosch or its Warranty Authorised Service Dealers hold about them. The end-user or Workshop can request to see, change or modify the personal information held about them, or withdraw consent for its usage, by contacting Bosch at the Bosch Contact Details below.

# A29 Voluntary Repair or Replacement

Warranty Robert Bosch (Australia) Pty Ltd  
Automotive Aftermarket

## Bosch Contact Details

This warranty is offered by Robert Bosch (Australia) Pty Ltd (ACN 004 315 628) of 1555 Centre Road, Clayton, Victoria 3168. Please call Robert Bosch (Australia) Pty Ltd on 1300 307 040 if in Australia or 0800 452 896 in New Zealand if you have any queries in relation to this warranty.

## Bosch Product List and Respective Warranty Periods

The following is a list of the classes of products sold by Bosch which are covered by this voluntary warranty, and the warranty periods which apply in each case. The warranty period is subject otherwise to the specific terms referred to in the main body of the warranty under the heading "Warranty Periods".

Battery Technology	Product Segment	Passenger Vehicle & SUV (Private use ONLY, Excluding "4WD")	4WD (Excluding "Auxiliary" Batteries)	Truck/Commercial & Industrial	Taxi (Inc Hire car/Uber)	Marine/Deep Cycle (Inc VRLA)
Sealed Maintenance Free	SM Mega Power Plus (S4) SM Mega Power Silver (S5)	36 Months	12 Months	12 Months	3 Months	-
Sealed Maintenance Free	SMT Mega Power Plus (T4) SMT Mega Power Silver (T5)	36 Months	12 Months	12 Months	-	-
EFB - Enhanced Flooded Battery	ST Hightec EFB	24 Months	18 Months	12 Months	3 Months	-
AGM - Absorbed Glass Mat	ST Hightec AGM	24 Months (Stop/Start) 36 Months (Normal use)	18 Months	12 Months	3 Months	-
Deep Cycle (Inc HCM)	Deep Cycle & High Cycle Marine (M4, M5)	-	-	12 Months	-	24 Months High Cycle Marine/ 12 Months Deep Cycle & VRLA

\* Bosch recommend the use of a diagnostic tool (E.g.. Bosch KTS Series) when replacing the Batteries in vehicles with Electronic Battery Management systems.

Bosch Automotive Aftermarket 2021

This catalogue contains data from the vehicles, engines and equipment for the Australian market from the year of manufacture 1990 up to and including October 2020. This data has been assembled from information provided by manufacturers and importers, Bosch documentation as well as from investigations made on vehicles as at the date of publication. It reflects the status as at October 2020.

Whilst every care has been taken in the preparation of this catalogue, it is not possible for Bosch to guarantee its sources or to avoid discrepancies caused by technical changes to vehicles, engines and equipment due to the conditions and regulations applying in Australia and New Zealand. Except in respect of any implied warranties which cannot be excluded by law, Bosch does not make any representation or warranty as to the accuracy, completeness or suitability of the information in this catalogue.

Bosch reserves the right to alter specifications and its product range without notice.

To the extent permitted by law, Bosch is not liable for any loss or damage whatsoever (including special, direct, consequential or incidental damages for loss of profits or loss of revenue) arising out of or relating to this catalogue whether arising in tort, contract, under statute, at law or otherwise.

Before relying on this catalogue, users may wish to carefully evaluate the information for their purpose and obtain further advice relevant to their circumstances. From time to time, Bosch may (at its discretion) issue bulletins containing updates to this information to which users of this catalogue should have regard.

# B149 Special Cases

<b>AA</b>	All-wheel drive
<b>AG</b>	For vehicles with automatic transmission
<b>AGM</b>	Only use AGM (Absorbent Glass Mat) battery for this vehicle
<b>BWD</b>	Attention: Battery replacement must be entered in control unit with diagnostic tester, e.g. KTS Series.
<b>GS</b>	For vehicles with manual transmission
<b>JBR</b>	Confirmation of the tray size is necessary
<b>KZN</b>	Not for cold climates
<b>SCR</b>	Hatchback
<b>SED</b>	For SEDAN model
<b>SSJ</b> 	For vehicles with Start-Stop function
<b>SSN</b>	For vehicles without Start-Stop function
<b>TW</b>	The product fitted must be identified on the vehicle or engine
<b>WW</b>	Optional
<b>YQ4</b>	74 A
<b>ZE</b>	Two required

## Logos

	No requirement for checking electrolyte fluid
	Passenger Vehicles
	For engines with Start-Stop technology
	Trucks and Buses
	Deep Cycle and Reserve Power
	Marine
	Light Commercial Vehicles
	4x4 and SUVs
