FSA vehicle system analysis:
The benchmark of innovative technology

Vehicle system analysis for every need

Workshop customers have high standards. So, if a vehicle has a problem, diagnosing the fault needs to be quick, thorough and affordable. With vehicle systems and components becoming ever more complex and diverse, workshops are best equipped to conduct quick and efficient, repair and maintenance using Bosch vehicle system analysis technology.

FSA 050

The handy diagnostic device for electric and hybrid vehicles complements the comprehensive workshop test system perfectly

S.08

FSA 500

The flexible entry point for simple diagnostics on electrical and electronic vehicle systems

S.10

“With the Bosch FSA series, you have the perfect solution for all vehicle diagnostic tasks.”

FSA 720

The convenient system tester for a wide range of diagnostics. A true allrounder for the workshop

S.12

FSA 740

Future-proof and expandable complete system for diagnostics, with TFT monitor, printer, remote control and practical trolley

S.14

Reliable vehicle analysis with Bosch

Reliable analysis and diagnostics save unnecessary work on a vehicle, which can save both time and money for customers and workshops. Workshops can make a lasting impression on new and existing customers while demonstrating their expertise using modular diagnostics systems from Bosch.

The state-of-the-art vehicle system analysis equipment enables a fast and efficient search for the source of faults. Workshops are always one step ahead with Bosch diagnostic technology because it offers:

- ▶ Pre-set component tests for testing electrical vehicle components when installed
- ▶ Display of actual values from the ECU diagnostics in the vehicle system analysis software
- ▶ Optional diagnostics of electric and hybrid vehicles
- ▶ Optional expandability with modules for exhaustgas measurement

Versatile analysis for every workshop requirement

All the key areas in the workshop can be serviced thanks to the modular diagnostic systems from Bosch. The vehicle system analysis can be set up as needed and then extended at any time. While existing diagnostic equipment can still be used, with Bosch it can be gradually upgraded to a comprehensive measurement and diagnostic system. A safe investment that will pay off quickly.

Five major benefits for workshops:

Accurate and effective search results for faults

More expertise in fault analysis

Ability to find faults in the vehicle system which are not present in the fault memory

A secure investment through innovative and future-proofed Bosch technology

Optimal supplement to control unit diagnostics

A man in a grey t-shirt is shown in profile, working on a vehicle. A large blue circular graphic is overlaid on the image, partially obscuring the man's face and the vehicle. The graphic has a white circle in the center. The background is a bright, slightly blurred workshop or garage.

**pre-set component tests
for testing electrical and
electronic vehicle components.
Through a larger monitor everything
remains visible at a glance.**

FSA 050:

Professional diagnostics of electric and hybrid vehicles

The FSA 050 enables every workshop to be prepared for the growing hybrid and electric vehicle market. This handy device enables the required high-voltage safety measurements such as voltage-free measurement on the system as well as insulation test and equipotential bonding measurement for troubleshooting.

The Bosch FSA 050 can be used as a stand-alone measuring device, for measuring value transmission even graphically and for measurement result documentation it can be connected via Bluetooth to an external PC system or the PC systems of the FSA 500 and FSA 7xx, completes your existing range of testing devices.

The FSA 050 is an important and simple diagnostic module for testing vehicles with electric and hybrid drive. With the ability to work wirelessly it's capable of performing multimeter functions such as voltage, resistance, capacitance, insulation and continuity tests, with measurements on the high voltage side up to 600 V (CAT IV1) as well as testing insulation resistance up to 200 GOhm at test voltages of 50 to 1,000 V.

The FSA 050 can be used in a variety of different ways, either as a device on its own for diagnostics of electric and hybrid vehicles, or as a special accessory for existing PC systems. Thanks to its compact dimensions of 220 x 110 x 65 millimetres (H x W x D) and its weight of just under 600 grams, there's a home for the FSA 050 in every workshop.

Order number

0 684 010 050

Easy connection via Bluetooth

Can be coupled with CompacSoft of the FSA 500 and FSA 7xx

Low-priced

Cost-effective diagnostics of electric and hybrid vehicles

Flexible as a device on its own

Also, can be used as an optional extra

Bosch Connected Repair 

The benefits of the FSA 050 at a glance

- ▶ Handheld device with wireless connection to a PC system
- ▶ Enables vehicle testing for both electric and hybrid drive
- ▶ Insulation testing
- ▶ High voltage testing
- ▶ Einsatz als Stand-Alone-Gerät oder als Sonderzubehör für FSA 500/720/740

FSA 500:

Simple diagnostics of electricians and electronics

The FSA 500 is the perfect entry into a more economical vehicle system analysis and perfect for workshops looking for a convenient solution in all standard diagnostic cases.

The handy FSA 500 is equipped with over 30 pre-set component tests and can be connected to existing systems and used for the gradual expansion of a workshop test system. Its strength lies in its ability to conveniently test important electrical and electronic components.

For full functionality of the FSA 500, it's recommended for use in conjunction with the robust DCU 220 (Diagnostic Control Unit), the convertible PC specifically designed for use in the workshop. The device can be used as a tablet PC or notebook and enables comfortable working in busy workshop conditions.

Order number
0 684 010 512

“The FSA 500 is suitable for mobile use in all standard requirements in electrical and electronic testing.”

Bosch Connected Repair 

The benefits of the FSA 500 at a glance

- ▶ Compact, battery-powered measuring module with Bluetooth connection to the PC system
- ▶ Software for testing the most important electrical and electronic components in the vehicle
- ▶ Over 30 pre-set component tests
- ▶ Signal generator for the simulation of sensor signals
- ▶ Battery power measurement up to 24 hours
- ▶ Suitable for 12 V / 24 V / 48 V onboard electrical systems
- ▶ Convenient universal oscilloscope with 2-channel (2 x 40 MS/s) and 4-channel mode (4 x 1 MS/s)
- ▶ Test of vehicle bus systems (e.g. CAN bus)
- ▶ Loading and saving of comparison curves
- ▶ Engine test functions
- ▶ Ignition scope
- ▶ Optional: Software useable on DCU 220

Minimum requirements for PC or notebook:

CPU Intel / AMD 1.8 GHz or higher
At least 5 GB of free hard disk space
1 USB port (2.0)
RAM 2 GB
DVD drive

Operating system:

Windows 7 Home Premium / Professional (32/64 Bit)
Windows 8 (32/64 bit)
Windows 10 (32/64 bit)

Adaptation options:

Software can also be used on DCU 220

FSA 720:

Convenient system tester for a wide range of diagnostics

Measurement and correct diagnostics on a vehicle must be efficient and flexible. No problem for the Bosch FSA 720, the vehicle system analysis device can carry out many tests without having to remove any components.

A true all-rounder, the FSA 720 is the diagnostic platform of the future. Whether used for a classic engine or component test, the basic device with its innovative software is prepared to cope with troubleshooting tasks of today and tomorrow. The functional scope of this device is further increased when used in conjunction with the FSA 050 for testing electric and hybrid vehicles and other diagnostic systems.

In addition to the actual measuring module, the Bosch FSA 720 system tester includes comprehensive sensor equipment with ten sensor slots and a free slot for additional sensors. Its menu-guided test steps, optional vehicle-specific set point values and the display of actual values, make it even more convenient for workshops.

Order number
0 684 010 500

“A clear menu structure and helpful step-by-step instructions greatly simplify the handling of the FSA 720.”

Bosch Connected Repair 

The benefits of the FSA 720 at a glance

- ▶ Measuring module with comprehensive sensor equipment
- ▶ Over 50 pre-set component tests
- ▶ Software with test steps and component tests for testing vehicle electronics and electrics
- ▶ Powerful oscilloscope with high sampling rate (2 x 50 MS/s)
- ▶ Simulation of sensor signals for sensor testing when installed
- ▶ Quiescent battery power measurement up to 24 hours
- ▶ Testing of a vehicle bus system (e.g. CAN bus)
- ▶ Loading and saving comparison curves
- ▶ Measuring module with USB connection to PC system
- ▶ Also suitable for 12 V / 24 V / 48 V electrical systems
- ▶ Diagnostics and troubleshooting of ignition systems in modern and older cars

FSA 740:

Future-proof and expandable complete system for comprehensive diagnostics

The FSA 740 is the comprehensive and complete system for accurate and economical vehicle system analysis from Bosch. Workshops can get started immediately and put vehicle components through their paces, reliably and quickly.

The FSA 740 is a true all-rounder, consisting of a measuring module, extensive sensor equipment, PC system including a 24" TFT monitor, remote control, printer and a practical trolley. A comprehensive range of accessories makes the FSA 740 a universal system with optimally tuned (coordinated) modules. If required, the device can be extended with ECU diagnose or emission (gas) systems analysis.

With the product facelift, FSA 740 got ready to deal with 48 Volt systems: Specific test instructions and measurement technology for new cars with 48V technology are already integrated. This enables analysis and diagnosis of current and future vehicle components and electric motors in particular.

Ten sensor ports and an additional free sensor port ensure that the FSA 740 is very well prepared for future requirements. Diagnosis is performed by menu guided test procedures, component tests and signal generator.

Driven by efficiency

Technology from Bosch is used in practically every vehicle in the world. For us, the focus is on people and helping them to stay mobile.

We have been dedicated to people for more than 125 years with our pioneering spirit, research, production, and expertise.

And we continue to work on our combination of solutions for spare parts, diagnostic devices, workshop equipment, and services:

- ▶ Solutions for efficient vehicle repairs
- ▶ Innovative workshop equipment and software
- ▶ One of the world's largest selections of new and replacement parts
- ▶ Large dealership network for quick and reliable parts supply
- ▶ Competent hotline support
- ▶ Comprehensive educational and training offerings
- ▶ Targeted sales and marketing support
