

Invented for life

BOSCH

The Solution for a Connected Workshop:

Bosch Connected Repair

Bosch Connected Repair 

Quick, easy, connected:

Increase efficiency in your workshop with Bosch Connected Repair

Within the workshop there are devices and services that need information: Data about the vehicle, about the fault or required service. All of these systems communicate with the user – but not with each other. Bosch Connected Repair is the perfect solution: software that connects the workshop equipment, vehicle data and repair data. Whether saving test results, fault data, or images according to data protection basic regulation – Bosch Connected Repair has been adapted to meet our customers' every requirement. So that you will remain competitive into the future.

Your benefits at a glance:

■ **SAVE TIME**

Vehicle identification is performed once and then transmitted to all connected devices. At 30 seconds per vehicle, this means time savings of several hours per year.

■ **FACILITATE PROCESSES**

Test protocols, comments and images are directly saved to the digital job card.

■ **INCREASE EFFICIENCY**

All employees can easily access the digital job card and the vehicle status any time. Typos are reduced to a minimum.

■ **EXPAND THE FUNCTIONAL SCOPE**

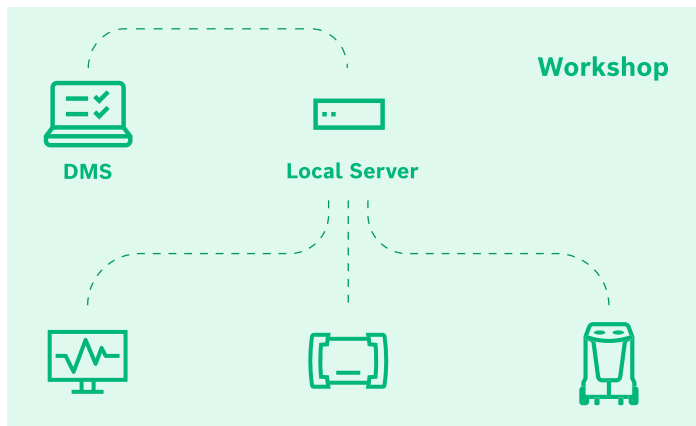

The measurements results of products by other manufacturers can be attached to an order and benefit from the electronic database.

■ **BOOST CUSTOMER SATISFACTION**

A clear and transparent final protocol provides reassurance to the customer.

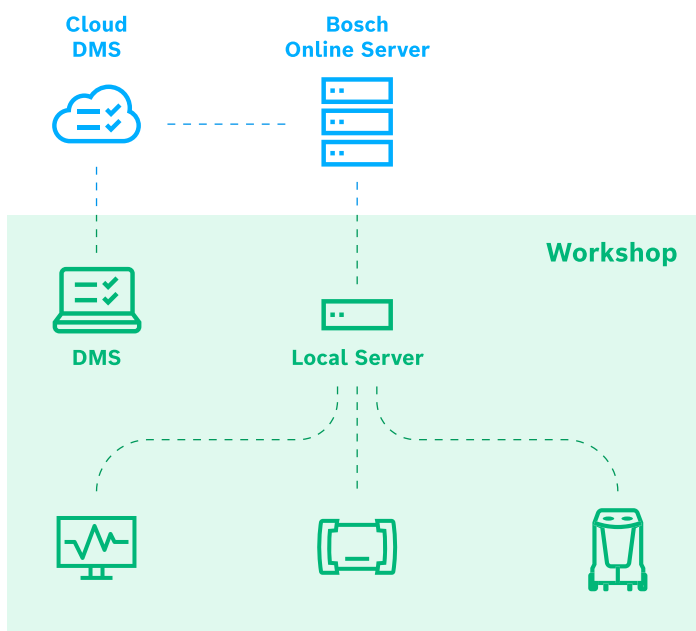

Bosch Connected Repair, Bosch Connected Repair Cloud and Bosch Connected Repair Online are included in the **ESI[tronic]** Advanced and Master packages.

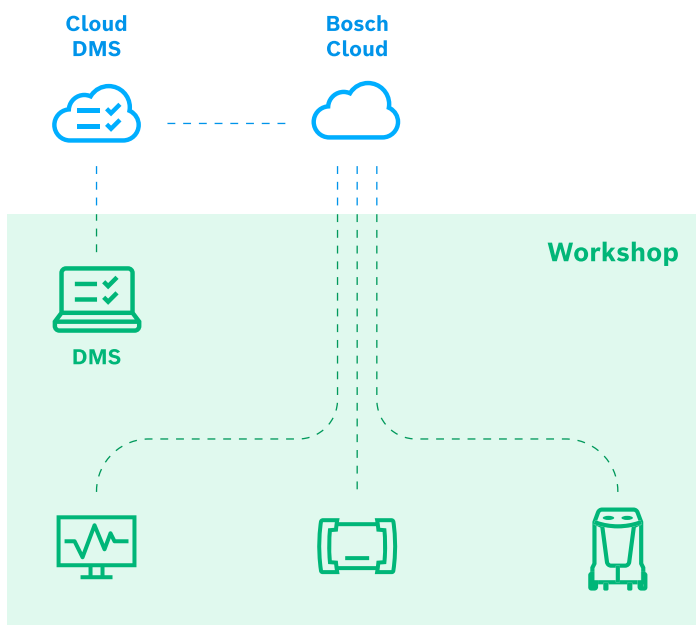

Bosch Connected Repair

Work more efficiently and profitably with Bosch Connected Repair, the digital networking solution including diagnostics, workshop equipment, vehicle data, technicians and service advisors for the exchange of service and repair information.

Bosch Connected Repair Online

With Bosch Connected Repair Online, workshops benefit from all the existing features of Bosch Connected Repair, plus the added option to connect to all future cloud-based dealer management systems.

Bosch Connected Repair Cloud

With the introduction of Bosch Connected Repair Cloud, the service is now even more convenient and eliminates the need for local servers, allowing workshops to further simplify their workflows and increase efficiency.

The Comprehensive Solution for Efficient Work

The Bosch Connected Repair menu bar provides a user-friendly overview of vehicle data and open work tasks. Individual information about the vehicle, the current processing status and the collected test results are available at a glance.

Connecting workshop management systems

The benefits of Bosch Connected Repair are available to any workshop right now. There are already more than 50 partners around the world currently supporting Bosch Connected Repair connectivity.

Detailed vehicle history

Vehicle information from former visits is stored and easy accessible. Even PDF files from external systems can be included, thus complementing the history of the customer's vehicle.

Integration of images with the PictureApp

Images of mobile end devices can be easily included and commented in the digital job card.

Extensive documentation

As an additional feature to the individual reports, all results of the individual tests can also be displayed as a summary. A personalized version of the report incl. an individual company logo is also possible.

Reviewing progress

The service manager can view the status of the digital job card any time. All employees can access the job card any time and by using any of the connected devices. The integrated e-mail function facilitates the direct sending of information such as job cards, pictures and tasks to the customer.

Connectable in many ways

Not only Bosch products but also products by third-party manufacturers (using an up-to-date Windows version) can also submit measurement results to Bosch Connected Repair and benefit from the electronic database.

Quick vehicle identification

New search algorithms in connection with flyout menus facilitate and accelerate vehicle identification. The identification by means of different characteristics can be directly read out of the vehicle.

Smooth Workflow in Everyday Life

How Bosch Connected Repair makes everyday work easier in just a few steps, for example when calibrating Driver Assistance Systems.

1

Starting the diagnostics routine

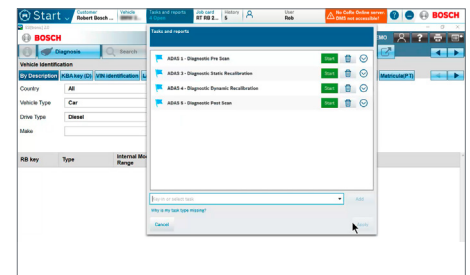

Quick vehicle identification with system overviews and fault codes with the ESI[tronic]. Open work tasks are created and assigned in Bosch Connected Repair. The user is guided through the tasks step by step.

2

Guided instructions for the calibration panel set-up

Carrying out the work steps created and specified in Bosch Connected Repair, e.g. setting up the calibration panel (position, height, reference for distance measurement)

3

Starting the sensor recalibration

Diagnostic process executes the calibration routine and shows the status of the calibration based on pre-set tolerances.

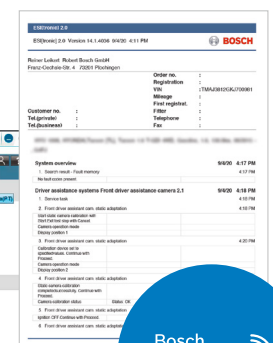

4

Result protocol

Complete documentation secured in the cloud or file repositories

- Pre-/post-scan
- Status of the sensor calibration
- Documentation of the alignment of the calibration device and panels
