

Steering Pumps for Commercial Vehicles

Steering heavy loads with stability and ease

In commercial vehicles with high steering and axle loads, the function of steering systems essentially draws on the principle of hydraulic steering assistance. This means that hydraulic steering pumps provide the fluid pressure required for the operation of hydraulic steering systems in commercial vehicles safely at all times. This significantly reduces the effort required by the driver and enhances driving comfort.

The global Bosch range includes more than 550 steering pumps for commercial vehicles (about 280 for European applications), which are ideally matched to the applied steering system. They undergo stringent function and quality tests based on the original equipment standards. As a high-quality alternative for repairs in line with the vehicle's current value, selected steering pumps for commercial vehicles are also available in the Bosch eXchange program.

High vehicle coverage
with over 550 part numbers
(about 280 for European applications)

High availability
helps to ensure that commercial
vehicles are quickly back on the road

Quality and reliability
according to the same standards
as for original equipment parts

The Bosch program includes steering pumps for commercial vehicles from the following manufacturers:

- ASTRA
- Breda
- CLAAS
- Daewoo
- DAF
- Demag
- ERF
- FAUN
- Ford
- Freightliner
- Gräf & Stift
- GROVE
- Hyundai
- Irisbus
- IVECO
- KHD
- Leyland
- Liebherr
- MAN
- Menarinibus
- Mercedes-Benz
- Neoplan
- Otokar
- Paccar
- Renault
- Scania
- Setra
- Sisu
- Solaris
- Steyr
- TEMSA
- Terex
- Vison
- Volvo
- Workhorse
- Youngman
- ...
