

Hydraulic Steering Systems

Steering safe and comfortably

In hydraulic steering systems, a hydraulic steering pump supports the driver while steering. This enhances driving comfort and significantly reduces the force required by the driver. As a particularly safety-relevant vehicle component, steering systems are practically maintenance-free and their durability is designed for the entire vehicle life cycle.

However, due to an accident or mechanical overload they sometimes need to be replaced. For this, the Bosch range includes over 350 hydraulic steering systems for passenger cars and light commercial vehicles. Bosch steering systems pass stringent functional and quality tests based on original equipment standards. As a high-quality alternative for repairs in line with the vehicle's current value many of the steering systems are also available in the Bosch eXchange program.

High vehicle coverage
with over 350 part numbers

High availability
helps to ensure that vehicles are quickly back on the road

Quality and reliability
according to the same standards as for original equipment parts

The Bosch program includes hydraulic steering systems for vehicles from the following manufacturers:

- Alpina
- Audi
- BMW
- Citroën
- Dacia
- DS (Citroën)
- Fiat
- Iveco
- Jaguar
- Lada
- Rover Group
- Mercedes-Benz
- Nissan
- Opel
- Peugeot
- Porsche
- Renault
- Seat
- Skoda
- Toyota
- Vauxhall
- Volvo
- Volkswagen (VW)
