

Product Information

Cabin filters for HEV & EV applications

Bosch cabin filters for increased comfort and health protection

Bosch cabin filters protect the most valuable parts of the vehicle: driver and occupants. A higher health consciousness and a risen awareness for topics such as nitrogen oxides, ozone in cities around the world in addition to protection against fine dust, bad smells, bacteria and allergies among the drivers, highlight the importance of cabin filters.

The new generation FILTER⁺pro is also highly effective against viruses and mold. In addition to this health protection, Bosch cabin filters also reduce the amount of deposits on the air conditioning system thus supporting its energy-efficient operation.

Even in case of electric vehicles Bosch recommends replacing them every 15 000 kilometers or at least once a year. Use your chance and benefit from this additional business!

Broad range of Bosch cabin filters for electric vehicles

The number of newly registered electric vehicles has risen dynamically. As a result, electric cars, hybrid and plug-in hybrids are also of increasing importance for workshops.

Featuring a market coverage exceeding 95 %, Bosch range includes cabin filters for most electric and hybrid vehicles on the European market. In view of the changing aftermarket business concerning electric vehicles, the broad Bosch range of cabin filters provides workshops with good chances for additional turnovers.
