

Bosch Vehicle Health Certificate

Software-based service for assessing the status of used vehicles by reading out stored vehicle data

For more efficiency and transparency in the preparation of expert opinions: Bosch offers vehicle appraisers a quick and easy solution that assesses the status of used vehicles based on software and provides a manufacturer-independent certificate – even for electric cars.

The assessment of vehicles is not only time-consuming, but also calls for a high level of technical expertise. The competence requirements continue to rise due to the increasing complexity of vehicle systems. With the Bosch Vehicle Health Certificate, Bosch is expanding its offering with a service that provides vehicle appraisers a fast, software-based assessment of the vehicle's status. The service is easily accessible via established Bosch diagnostic solutions.

Using the diagnostic software ESI[tronic] Evolution and the diagnostic module KTS 560 or 590 from Bosch, the data stored in the vehicles is read out remotely from the control units, processed and consolidated in a user-friendly, manufacturer-independent Bosch certificate.

Used vehicle information in the Bosch certificate

Crash history:

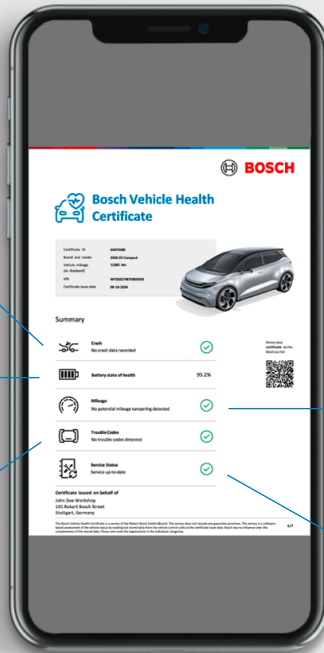

information on stored crashes in the vehicle system

Health status of the high-voltage battery:

determination of the current performance of the traction battery in electric vehicles

Error code listing:

documentation of error codes stored in the vehicle system

Mileage deviation:
indication of a potential mileage manipulation

Service interval overdue:
information on a possible exceeding of the latest service interval

How the issuing of the certificate works

Connecting the vehicle to the Bosch diagnostic module KTS 560 or 590

Commissioning of the certificate creation via the Bosch diagnostic software ESI[tronic] Evolution

Remote readout and processing of the stored vehicle data from the control units

Provision and delivery of the Bosch certificate – in printed or digital form

Advantages at a glance

- **Support for the preparation of expert opinions:** the software-based testing procedure reduces the effort and facilitates vehicle assessment
- **Convince with transparent vehicle appraisals:** the Bosch certificate enables a high-quality enhancement with vehicle-specific data
- **Vehicle assessment according to current requirements:** the certificate contents are continuously extended and further developed
- **Neutral software-based assessment of the vehicle status:** manufacturer-independent Bosch certificate thanks to the readout of stored data from the vehicle control units
- **Competent partner:** Bosch is an experienced developer of innovative mobility solutions with a comprehensive knowledge of the entire mobility market
